

LOCATION

Fitzwilliam, NH

DATE OF WORK

June 2015

PROJECT

B-8336

*Transformer from Brazil to  
Fitzwilliam Substation.*

HLI utilized ocean freight from Brazil to the Port of Baltimore, it was then transferred to rail, arriving at a rail siding in Otter River, MA. After arriving at the rail siding, the transformer was offloaded from its heavy duty rail car to an over the road transport system to be delivered to the substation. Jack and slide was utilized to transfer the transformer from the railcar to trailer.

The crew jacked the transformer up off of the car, and used the slides to move the unit over to the platform trailer. Once loaded to the transport trailer, the transformer was transported to its final destination inside the substation. After a safe arrival at the substation location, it was removed from the transporter using the jack and slide system again. This put the transformer onto the final pad. Once installed, the unit was tested successfully.
