July 2017

PROJECT

B-11620

Transformer from port of entry to foundation

HLI was hired to ship this 156,746.Lb transformer from the factory in Mexico all the way up to Sandusky, OH.. The journey began deep in Mexico moving by rail. After arriving at the rail siding, the transformer had to be offloaded from its heavy duty rail car to an over the road transport system to be delivered to the substation. The best choice for offloading this heavy transformer from the rail car and loading the large transporter was using a jack and slide

The crew jacked the transformer up off of the car, and used the slides to move the unit over to the platform trailer. Once loaded to the transport trailer, the transformer was hauled to the final destination inside the substation. After a safe arrival at the substation location, it was removed from the transporter using the jack and slide system again. Megger testing was completed after installation, and finally the accessories were placed in their required position.
