Lynchburg, VA

DATE OF WORK

February 2018

PROJECT

B-10758

*Transformer from railway
to final destination*

HLI railed this 168,484 lbs. transformer from the nearest rail siding in Lynchburg, VA. Once arrived at the rail siding, the transformer had to be offloaded from its heavy-duty rail car to an over the road transport system to be delivered to the substation in Lynchburg. The best choice for offloading this heavy transformer from the rail car and loading the large transporter was using a jack and slide system.

The crew jacked the transformer up off of the car, and used the slides to move the unit over to the platform trailer. Once loaded, the transformer was delivered to the substation. Upon arrival, it was removed from the transporter using the jack and slide system again. This put the transformer onto the final pad and ready for assembly and installation.
