Pataskala, OH

DATE OF WORK

March 2018

PROJECT

B-11245

*Transportation of a transformer*

HLI was contracted a transformer from the Port of Entry, to a rail siding near the wind farm project located in El Reno, Oklahoma. After arriving at the rail siding, the transformer had to be offloaded from its heavy-duty rail car to an over the road transport system to be delivered to the substation.

The best choice for offloading this heavy transformer from the rail car and loading the large transporter was using a jack and slide system. Counter weights were used to balance out the weight of the truck bed. Then, the crew jacked the transformer up off of the car and used the slides to move the unit over to the platform trailer. All accessories and units were delivered on time.
