Midway, TN

DATE OF WORK

June 2019

PROJECT

B-12580

*Transformer from port
of entry to foundation*

HLI railed this 226,100 lb unit from Port of Houston, TX to a rail siding in Midway, TN. After arriving at the rail siding, the transformer had to be offloaded from its heavy duty railcar to an over the road transport system to be delivered to the substation. The best choice for offloading this heavy transformer from the railcar, and then loading it onto a large road transporter, was using the jack and slide system.

The crew jacked the transformer up off of the car, and used the slides to move the unit over to the Goldhofer trailer. Once loaded to the trailer, the transformer was transported to its the final destination inside the substation. After a safe arrival at the substation location, it was removed from the transporter using the jack and slide system again, and then placed onto the final pad. Now it was ready for assembly and installation by the customer. Accessories were then unloaded and placed according to the customer requirements. Another project completed on time and within budget.
