Newport News, VA

DATE OF WORK

September 2020

PROJECT

B-11974

*Transformer from port of entry to Site.*

This 497,500 Lbs transformer was shipped from Altamira, Mexico to the Port of Virginia. HLI's crew arrived at the port to inspect the unit, before unloading commenced. After inspection, the unit was cleared and loaded to an awaiting Goldhofer trailer. Once secured, it began its journey to a temporary storage facility.

The Goldhofer made a slow and meticulous trip to the storage facility, where HLI's team was awaiting its arrival. Once the Goldhofer was positioned correctly in the facility, HLI's crew began the time-consuming process of jacking-up the transformer to free it from the trailer. Now the trailer was removed and the Transformer lowered to the ground. HLI's crew to return at a later date, to retrieve the unit and deliver to the customers site, once the site is completed. Another project completed on time and within budget.
